

An Innovative Construction Opportunity

Idea No59
Design Studio

GLASGOW
**SCIENCE
CENTRE!**

The Design Studio will offer our visitors an innovative space to design, build and create.

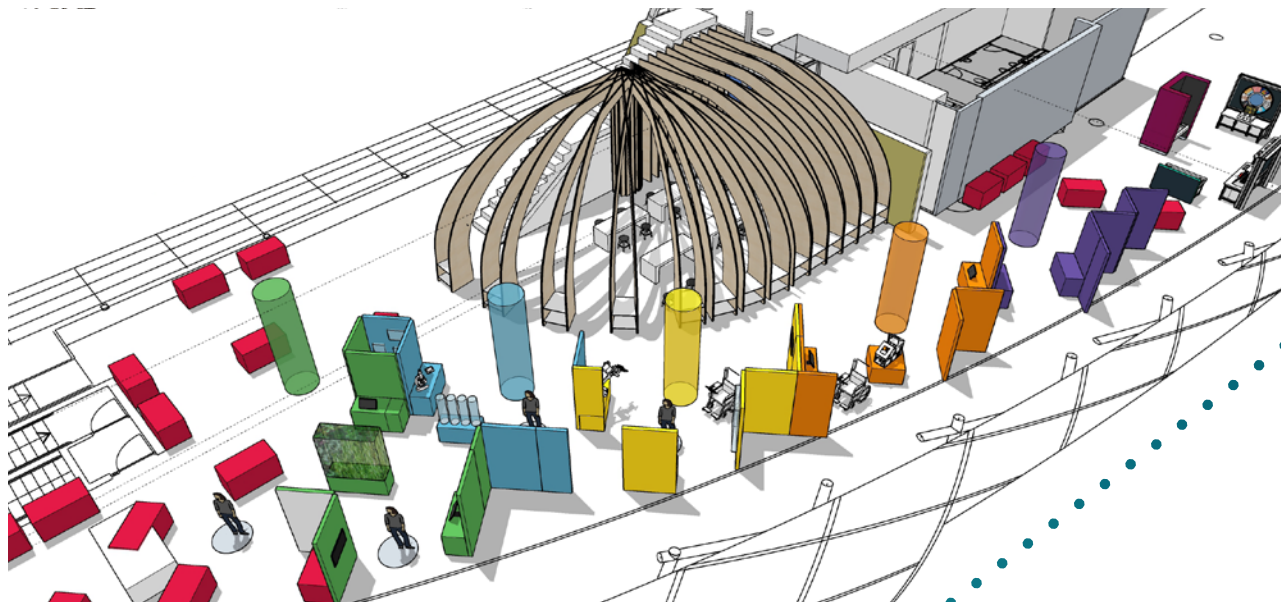

There is a unique opportunity for a construction partner to help us to develop the design, engineer the structure, manufacture the components and assemble the finished studio here at Glasgow Science Centre.

We would like to collaborate with an innovative company interested in participating in a unique venture, creating an installation showcasing their advanced capabilities and cutting-edge technologies, taking advantage of a huge public engagement platform in the UK's largest interactive science centre to tell their story.

Focusing on open ended learning problems, visitors will be encouraged to find their own solutions, developing their skills and experience in the design process.

We have a clear set of requirements for the Design Studio; where it will be, what size it should be and how it will be used. We are open to ideas and suggestions of how it could look, how it might be constructed and what materials it could be made from.

We have a budget of £50k and would like the Studio installed by Spring 2020.

Idea No59

Our new permanent exhibition is an exciting approach to inspiring the next generation of scientists and engineers.

Idea No59 is dedicated to inspiring everyone, from children to adults, to consider the future as our society is transformed by technology and innovation.

Featuring a combination of interactive exhibits, stories of innovation and hands-on workshops, Idea No59 is about exploring the trends that will shape the future.

The Design Studio is at the heart of the exhibition, which also includes an Innovation Zone and Skills and Strengths exhibits.
